Transplanting Dormant Hydrangeas

Using 2 separate 4" plants planting into 6" and larger containers

Step 1: prepare your tray of 4" 2-3 cane for transplanting

Step 2: Select (2) 4" 2+ cane plants and a desired finishing container.

Step 3: cut 1 corner off of each square dormant root ball.

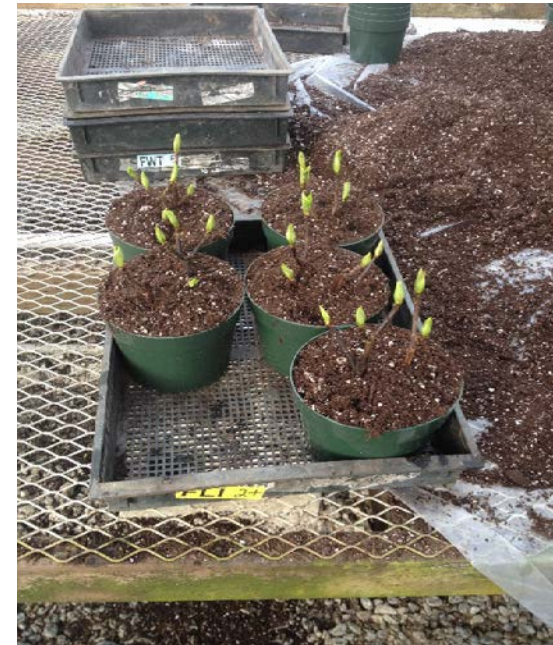

The only specialized tool needed over and above normal planting is a long knife. Preferably a serrated bread type knife. Generally costing in the range of \$1 to \$5.

Step 4: 2 plants each with a corner cut off.

Step 5: place 2 plants into 6" or larger pot. (6.5" azalea pot pictured)

Step 5: Fill Pot with Soil and place into growing area.

Finished Group of 4" 2+ cane plants Transplanted 2 per 6.5" Azalea pot. Achieving 4-6 canes per finished container.
